BULBS: Maximum of 4, no color, not to exceed 60W total.

Note: if LED only soft white or warm white

No daylight bulbs! No automatic dusk to dawn bulbs!

➔ **ARC Approval Required: indicate the installer and light specifications**

Self installation requires a waiver, professional installation requires a licensed and insured electrician acceptable to ARC. Plan your light installation before the paint project begins (target start is September for that).

Helpful Tips: Make sure that the bottom of the new light is at least 56" off the ground, so shop carefully. You may keep your existing lights. Be sure to send a picture with your ARC application and understand that if your choice moves towards contemporary, it may not be approved. The picture above is one example. Take a look at the NEW lights installed at 20862.
